Four-arm server audit
Joint heterogeneity
Different model families and tokenizers
Local data mixture clean / conflict / off-task
A: anchor only no client transfer
B: clean uniform transfer
C: severe uniform transfer
D: severe routed transfer
B–A clean-transfer utility
C–B contamination sensitivity
D–C routing intervention
Matched-size mechanism audit
Fixed K=128, label quotas, steps, and severe mixture
Random-K target eligible
Routed-K score ordered
Maximum-purity-K still contains conflict
Inferential roles
TREC hypothesis-generating discovery
IMDb protocol-frozen eval.
AG News prior task-specific evidence
